

Local SEO Update

Parthenon Diner — parthenondiner.com

February 7, 2026

New Location Landing Pages NEW

Two dedicated pages were created to target location-specific Google searches like "restaurant in Branford CT" and "diner Old Saybrook".

Branford

[/branford](#)

Targets Route 1, Branford Green, East Main Street. References Guilford, East Haven, North Branford.

Old Saybrook

[/old-saybrook](#)

Targets Boston Post Road, lower shoreline. References Westbrook, Essex, Old Lyme.

Each page includes a hero section, about copy with local keywords, Google Maps embed, hours & directions, menu highlights, online ordering CTA, cross-link to the other location, and full structured data.

Homepage Enhancements

- **Hero section** — Added "at our Branford and Old Saybrook locations along Connecticut's shoreline"
- **About section** — Added street names (East Main Street, Boston Post Road) and nearby town names
- **Locations section** — Added "near Branford Green on Route 1" and "on Boston Post Road"

- **Location cards** — Added "View Details" links to the new landing pages

Structured Data & Schema

Breadcrumb Schema

Added BreadcrumbList structured data to all pages, which helps Google display breadcrumb trails in search results:

Page	Breadcrumb Path
Homepage	Home
Menu	Home › Menu
About	Home › About Us
Events	Home › Events
Branford	Home › Branford
Old Saybrook	Home › Old Saybrook

Aggregate Ratings Corrected

Updated schema to reflect actual Google ratings:

Location	Rating	Reviews
Branford	4.2	1,493
Old Saybrook	4.3	1,189

Site-Wide Updates

- **Footer links** — Added "Branford Location" and "Old Saybrook Location" to the Quick Links footer on all pages (Homepage, Menu, About, Events, Feedback, Not

Happy)

- **Sitemaps** — Added both location pages to `sitemap.xml` and `sitemap-images.xml`
- **404 redirects** — Added redirects for `/branford/`, `/old-saybrook/`, `/oldsaybrook`, `/locations`, and variations

Why This Matters

Location pages are the #1 ranking factor for "near me" and city-specific restaurant searches. Google favors pages dedicated to a single location over a homepage that mentions multiple locations. Combined with breadcrumb schema, internal linking, and accurate ratings, these changes significantly improve local search visibility.

Other Recommended Steps

- **Google Search Console** — Submit the updated sitemap and monitor indexing of the new pages
- **Review counts** — Update schema periodically as new Google reviews come in
- **Local content** — Consider adding customer testimonials or neighborhood-specific content to each location page over time

Google Business Profile — Weekly Optimization

CRITICAL

Your Google Business Profile is one of the most powerful tools for local search visibility. Google's algorithm heavily favors businesses that actively manage and update their GBP on a regular basis. A well-optimized website gets

you halfway there — but consistent GBP activity is what drives the Local Pack rankings (the map results that appear above organic results).

Why Weekly GBP Activity Matters

- **Google rewards engagement.** Businesses that regularly update their GBP signal to Google that they are active, relevant, and trustworthy. Inactive profiles get deprioritized over time.
- **The Local Pack is where the clicks are.** For restaurant searches, the 3-pack map results capture the majority of clicks. GBP optimization is the primary way to rank there — website SEO alone won't do it.
- **Competitors are doing it.** If nearby restaurants are posting weekly and responding to reviews while your profile sits idle, Google will favor their listings over yours.

What to Do Every Week

Activity	Why It Helps
Post a Google Business update (photo of a dish, daily special, seasonal item, event)	Fresh posts show Google your business is active and give customers a reason to engage. Posts appear directly on your listing.
Respond to every new review (positive and negative)	Review responses are a confirmed ranking factor. Thank happy customers by name and address concerns professionally. Even a short "Thank you!" counts.
Upload new photos (food, interior, staff, exterior)	Listings with 100+ photos get 520% more calls than average. Google uses photo recency as a freshness signal.
Update hours for holidays/special events	Keeps your listing accurate and avoids "hours might differ" warnings that reduce trust.

Monthly GBP Tasks

- **Update the business description** with seasonal keywords (e.g., "outdoor dining" in summer, "holiday catering" in November)
- **Ensure each GBP listing links to its dedicated location page** (/branford and /old-saybrook) instead of the homepage
- **Review your GBP insights** — track which search terms are driving views and calls
- **Add new menu items or services** as they change
- **Check for and remove duplicate listings** or suggested edits from the public

The bottom line: Think of your GBP as a social media profile for Google Search. The businesses that show up in the Local Pack aren't just the ones with the best websites — they're the ones that consistently interact with their profile. **15–20 minutes per week** of GBP activity can have a bigger impact on local rankings than any single website change.
